Acupuncture is an effective form of health care that has evolved into a complete and holistic medical system. Acupuncturists and practitioners of Traditional Chinese Medicine (TCM) use this non-invasive healing modality to help millions of people get well and stay healthy.

When a patient seeks Acupuncture care and is accepted as a patient for such care, it is essential for both patient and Acupuncturist to be working toward the same objectives in order to prevent any confusion or disappointment.

The main objective of Acupuncture is to determine where there are imbalances in the body as they relate to TCM. When the flow of Qi (the vital energy that flows throughout the body) is disrupted, illness and disease may occur. An imbalance in any of the 14 main Meridian channels causes an alteration in the flow of Qi through the body. This can result in a lessening of the body's innate ability to heal itself and express maximum health potential.

Once imbalances are detected, various treatment modalities may be employed to correct these imbalances. Any health condition(s) or disease(s) presented by the patient will be treated according to TCM only and treatment will relate only to the quantity, quality and balance of Qi.

The ONLY practice objective is to detect and correct imbalances within Meridian channels using Acupuncture and TCM techniques.

Patients will be advised if a non-Acupuncture related or otherwise unusual finding is encountered during the course of an Acupuncture examination. If advice, diagnosis or treatment of those findings is desired, patients will be referred to a qualified health care professional.

qualified health care professional.		
I,, have read and fully u	understand the above statements.	
All questions regarding the acupuncturist's objectives pertaining to my care in this office have been answered to my complete satisfaction. I therefore accept Acupuncture care under these terms.
